Special Track on Software Verification and Testing

Jun Pang, University of Luxembourg, Luxembourg

Mohammad Reza Mousavi, Eindhoven University of Technology, The Netherlands

Welcome to the proceedings of the Software Verification and Testing track at the 2012 ACM Symposium on Applied Computing. This year we received a record number of 43 submissions, which clearly shows that our field is very vigorous. Each submission received at least 3 review reports (most received 4) provided by our international Program Committee (PC) and/or external reviewers. Afterwards, the papers were extensively discussed in the virtual meeting of the PC and the PC decided to select 12 papers among the submissions for presentation in the symposium and publication in its proceedings. The accepted papers cover different topics in the area of formal verification and model-based testing.

We would like to thank all the members of the program committee for their hard work during the review process, the external reviewers for providing review reports, the authors for submitting their papers to the track, and the participants for attending it. Also, we would like to thank the program chairs and the organizers of the ACM SAC 2012 who provided the infrastructure for this event. We like to believe that this edition has been very successful and the credit goes to all people mentioned above.
